DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I in the reply filed on 9-20-04 is acknowledged. The traversal is on the ground(s) that all claims can be examined without serious burden. This is not found persuasive because the method claims of Group II require a different search than the golf ball claims in Group I. Applicant's arguments with respect to claim 44 are not understood. Claim 44 can be examined with the golf ball claims of Group I because the method steps are generic. If claim 44 is found allowable the dependent claims will be rejoined.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear which crosslinking agent is claimed in claims 1, 27, and 44. Paragraphs 28 and 29 disclose unsaturated carboxylic acid as well as peroxides as crosslinking agents. The claims should clearly indicate which ingredient is claimed.

Art Unit: 3711

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 7-16, 18-32, and 34-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Voorheis et al (2004/0230006). Regarding claims 1 and 44, Voorheis discloses a golf ball core composition comprising 1,4-polybutadiene, peroxide (crosslinking agent), and pentachlorothiophenol, may be nonmetal (peptizer) (para. 84). Regarding claims 2-5, pentachlorothiophenol (peptizer) is present in the amount from 1 to 25 pph (para. 105). Regarding claims 7-11, mercaptobenzothiazole (accelerator) is present in the amounts of 0.5, 1.0, 2.0, 3.0, and 5.0 (see table 2, ZETAX). Regarding claims 12-14, peroxide (crosslinking agent) is present in the amount from 0.2 to 5 pph (para, 122). Regarding claim 15, the core composition is made from 1,4-polybutadiene (para. 65). Regarding claims 16-18, the core composition includes filler such as zinc oxide, barium sulfate, and tungsten (para. 137). Regarding claims 20 and 21, the core composition includes metal salts of unsaturated carboxylic acid in the amount from 20 to 40 pph (para. 130, 133). Regarding claim 22, the golf ball includes a core and cover, wherein the core is made from the composition (see above). Regarding claim 23, the core may include multiple layers (para. 40). Regarding claim 24, a portion of the core

Art Unit: 3711

may be liquid (para. 63). Regarding claim 25, the golf ball may include a wound layer (para. 59). Regarding claim 26, the golf ball includes a core, intermediate layer, and cover, wherein the core is made from the composition; see above (para. 59). Regarding claims 27-29, Voorheis discloses a golf ball core composition comprising 1,4polybutadiene, peroxide (crosslinking agent), and pentachlorothiophenol (may be nonmetal) (peptizer). Peroxide (crosslinking agent) is present in the amount from 0.2 to 5 pph (para. 122). Pentachlorothiophenol (peptizer) is present in the amount from 1 to 25 pph (para. 105). Regarding claim 31, mercaptobenzothiazole (accelerator) is present in the amounts of 0.5, 1.0, 2.0, 3.0, and 5.0 (see table 2, ZETAX). Regarding claim 32, the core composition is made from 1,4-polybutadiene (para. 65). Regarding claims 33-35, the core composition includes filler such as zinc oxide, barium sulfate, and tungsten (para. 137). Regarding claims 37 and 38, the core composition includes metal salts unsaturated carboxylic acid in the amount from 20 to 40 pph (para. 130, 133). Regarding claim 39, the golf ball includes a core and cover, wherein the core is made from the composition (see above). Regarding claim 40, the core may include multiple layers (para. 40). Regarding claim 41, a portion of the core may be liquid (para. 63). Regarding claim 42, the golf ball may include a wound layer (para. 59). Regarding claim 43, the golf ball includes a core, intermediate layer, and cover, wherein the core is made from the composition; see above (para. 59).

Art Unit: 3711

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 19 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Voorheis in view of Nesbitt et al (6,468,168). Voorheis discloses the invention as shown and above, including fillers in the composition. However, Voorheis fails to disclose the quantity of the fillers. Nesbitt teaches a golf ball core composition comprising fillers in the amount from 10 to 100 parts. One of ordinary skill in the art would have modified the Voorheis in view of Nesbitt to achieve the desired weight of the golf ball.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raeann Gorden whose telephone number is 571-272-4409. The examiner can normally be reached on M-F 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 571-272-4415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
